Education

Ulsan National Institute of Science and Technology

Ulsan, South Korea

Dual Bachelor of Science: Computer Science and Engineering, and Design

2020 - February 2025

- **Relevant Coursework:** Data Structures, Intro to Algorithms, Computer Networks, System Programming, Computer Architecture, Database Systems, Software Engineering
- **Awards:** Cum Laude (2025), Academic Awardee (2020)

Experience

Burt Intelligence

Gothenburg, Sweden (Remote)

Software Engineer

September 2025 - Present

- Delivered 85+ features and fixes end to end on an advertising analytics platform, from Angular clients through a Ruby on Rails REST API to the data layer, taking each change from design and documentation through code review to production release.
- Designed, tested, and shipped a period-over-period comparison feature for report tables, iterating with product on design revisions, writing unit tests with QA on integration coverage, and keeping results consistent across PDF, PPTX, and widget exports.
- Resolved cross-cutting rendering regressions from an Angular v17 to v21 and PrimeNG upgrade of a large monorepo, restoring the platform font stack, fixing overlay clipping, and rebuilding responsive filter layouts with CSS container queries.
- Diagnosed a production failure blocking enterprise customers from a live service, tracing it from the client through the REST API to a nil payload in the Rails service layer, and restoring access the same day while keeping customer-facing teams updated.
- Help bring agentic AI into the team's existing workflow, authoring a custom Claude Code skill that encodes our commit conventions and code standards so generated changes meet them, with every change human-reviewed and tested.

O.M Farm

Washington, USA (Remote)

Junior Software Engineer

January 2024 - December 2024

- Designed and built the OM Farm Portal (om.farm) as a set of microservices, splitting reads and writes into independently deployed article and agreement services behind a GraphQL API, backed by PostgreSQL and deployed on Google Cloud.
- Refactored a monolithic legacy codebase into NestJS microservices for Reply Intelligence (replyintelligence.com), shipping features across React, PostgreSQL, Firebase, and Google Cloud Functions.
- Monitored production services on Google Cloud, resolving deployment, messaging, and data consistency issues across Cloud Run, Pub/Sub, and Firestore.
- Built 30+ React and TypeScript features from Figma designs for a full-stack product backed by PostgreSQL and Firebase.

Human-AI Interaction and Visualization Lab

Ulsan, South Korea

Software Research Intern

July 2024 - December 2024

- Classified LLM code generation errors from SWE-Bench into bug, feature, removal, and security categories to inform model evaluation.
- Coded and synthesized 50 developer survey responses on code comprehension; findings published in a conference paper.

New Design Studio

Ulsan, South Korea

Service Design Intern

September 2023 - December 2023

- Rebuilt a university department website in WordPress with responsive, accessible layouts, improving how students and faculty navigate its content.

Projects

By Rachel <https://byrachel.com.au>

February 2026

- Designed and built an Australian marketing studio's site solo, setting the visual direction with the owner and shipping it in Angular and TypeScript on Vercel, with full SEO metadata (Open Graph, canonical tags) and keyboard skip-link accessibility.

Trusty Co <https://trustyco.au>

August 2025

- Designed and built a responsive single-page Angular and TypeScript site for an Australian cleaning service on Vercel; its EmailJS contact form is the business's main inbound inquiry channel, and the referral it earned produced the By Rachel engagement.

Technical Skills

Languages: TypeScript, JavaScript, Ruby, Python, Java, C++, SQL

Backend & Services: Node.js, NestJS, Ruby on Rails, Express.js, REST APIs, GraphQL, Microservices

Front-End: React, Next.js, Angular, HTML5, CSS3, SCSS, Figma

Cloud, Data & Tooling: AWS (S3, Athena), Google Cloud Platform (Cloud Run, Pub/Sub, Cloud Functions), PostgreSQL, MongoDB, Firestore, BigQuery, Docker, Git, CI/CD

AI-Assisted Development: Claude and Claude Code (custom skills), Cursor, GitHub Copilot
